Multiwavelength Optical LANs Georgios I. Papadimitriou, Paraskevas A. Tsimoulas, Mohammed S. Obaidat, Andreas S. Pomportsis

During the last thirty years or so it has been widely recognised in the research community that the key transmission medium seeming capable of serving both the ever-growing demand for bandwidth and the unceasing need for new services, is optical fibre. In this context, Wavelength Division Multiplexing (WDM) is the most popular technique for introducing concurrency among multiple user transmissions into the network and, thus, exploiting the huge amount of fibre bandwidth available under the severe limitations imposed by electronics speed on the maximum network access rate.

This book extensively covers an important research area in optical networking, enabling readers to fully understand the concepts of optical LANs and learn details of architecture issues and control protocols. Through its careful focus on the local area, the book, covers the major architectural, topological and protocol issues regarding optical Local Area Networks (LANs) today. Considering that constant advances on optical component technology make all-optical WDM LANs all the more feasible for a wide commercial deployment, the book investigates thoroughly the crucial latter topic, i.e. the Media-Access Control (MAC) protocols that should be used. Besides introducing a noteworthy part of the vast literature on such protocols and providing some helpful distinguishing key protocol characteristics, the book is also innovative in focusing on a recent significant class of promising protocols whose operation is based on network feedback information. In this way, these adaptive protocols for optical LANs achieve an overall higher performance in comparison with many other non-adaptive schemes.

Multiwavelength Optical LANs:

- Enables readers to understand the concepts of optical LANs and learn details of architecture issues and control protocols
- Focuses on the major architectural, topological and protocol issues regarding optical local area networks
- Presents the important class of adaptive protocols for optical LANs

No Optical systems/network developers, or engineers and scientists working in optical networking should be without this book. The well considered approach also makes this recommended reading for undergraduate and graduate computer science, computer, electrical and telecommunications engineering students.

From reader reviews:

Vincent Baker:

This book untitled Multiwavelength Optical LANs to be one of several books in which best seller in this year, here is because when you read this e-book you can get a lot of benefit upon it. You will easily to buy this particular book in the book shop or you can order it by way of online. The publisher with this book sells the e-book too. It makes you quicker to read this book, since you can read this book in your Smart phone. So there is no reason to your account to past this publication from your list.

Jeffery Hall:

Are you kind of hectic person, only have 10 or perhaps 15 minute in your moment to upgrading your mind ability or thinking skill possibly analytical thinking? Then you are experiencing problem with the book in comparison with can satisfy your limited time to read it because this all time you only find e-book that need more time to be read. Multiwavelength Optical LANs can be your answer because it can be read by an individual who have those short spare time problems.

Rosalind Bowlin:

In this period globalization it is important to someone to obtain information. The information will make anyone to understand the condition of the world. The health of the world makes the information simpler to share. You can find a lot of referrals to get information example: internet, newspaper, book, and soon. You will observe that now, a lot of publisher that will print many kinds of book. Typically the book that recommended for you is Multiwavelength Optical LANs this publication consist a lot of the information with the condition of this world now. This specific book was represented just how can the world has grown up. The vocabulary styles that writer use for explain it is easy to understand. The actual writer made some analysis when he makes this book. This is why this book suited all of you.

Peter Landon:

In this era which is the greater man or woman or who has ability in doing something more are more valuable than other. Do you want to become considered one of it? It is just simple approach to have that. What you are related is just spending your time little but quite enough to enjoy a look at some books. One of the books in the top collection in your reading list is Multiwavelength Optical LANs. This book and that is qualified as The Hungry Mountains can get you closer in becoming precious person. By looking right up and review this book you can get many advantages.
